

# GLOBAL SUPPLY MANAGEMENT

Elemica SmartLink Supplier Management Application

## What would it mean to remove a significant portion of working capital while better preparing your company for disruptions in the supply chain?

When ordering and tracking large shipments of raw materials, many factors can impact delivery schedules. Large “just in case” inventories puts a strain on working capital while not having safety stock increases the risk of shortages and stock outs.

**The largest industry-specific supplier collaboration network with cloud-based solutions for automating your supply chain processes.**

Reduces threat of stock outs without holding excessive inventory

Shrinks risk in supply chain

Supports a portfolio of international and local message standards

Reporting and visibility into shipment locations in the supply chain

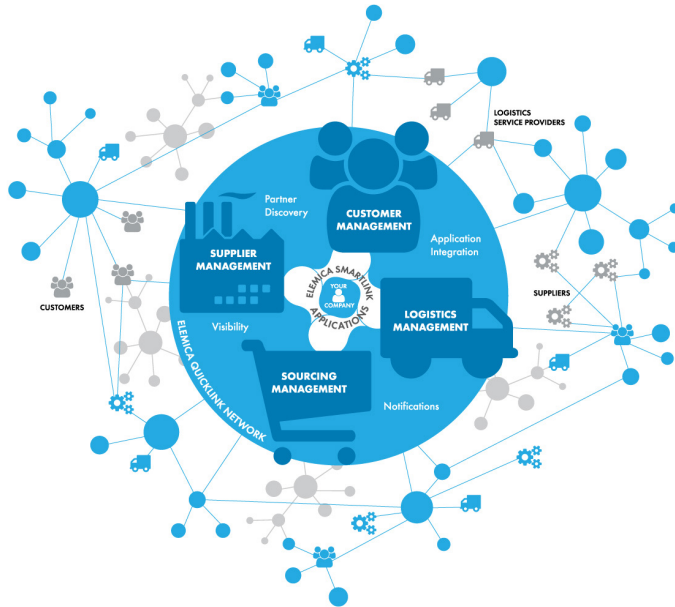

Ability to enter Monthly Forecast values for a specific Location and Product

Ability to see all iterations of a specific shipment

Elemica's Global Supply Management (GSM) provides automation, visibility, management and analysis for shipments and inventory across global multi-node supply chains. One key component of GSM is the management of inventory levels at every node in the supply chain which gives visibility for long term demand forecasting and supply replenishment. Inventories are tracked real-time and are monitored based on min/max stock levels and auto-reorders are placed in response to pending stock outages triggering plant-to-plant shipments. Ports and freight forwarders update an online application but have the option of automation through integration with back office applications.

**Solutions for Procurement and Finance Organizations**

## Supplier Management Solution Suite Overview

**Elemica Supplier Management delivers results that drives the ideal balance of inventory, working capital and service levels while providing innovative capabilities:**

### **Purchase Order Management:**

Eliminates the risk of small errors with manually entered orders.

### **Vendor Managed Inventory:**

Provides supply visibility across customers and products.

### **Delivery Forecast:**

Furnishes the supplier with discreet orders, order changes, and forecast documents.

### **Global Supply Management:**

Supports automation, visibility, management and analysis for shipments and inventory across global supply chains.

### **Certificate of Analysis (CoA):**

Attest or affirm the provided quality data is correct for a given product.

### **Invoice Management:**

Electronic invoicing for material, service and freight invoices.

## Transforming the Way Your Company Does Business

As the leading Supply Chain Operating Network for the global process industries, our customers create and operate high performance supply chains with solutions at the heart of their business. Elemica drives bottom line business results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers, and seamless information flow between business partners. We transform supply chains by replacing manual and complex approaches with automated and reliable ones.
