

PURCHASE ORDER MANAGEMENT

Elemica SmartLink Supplier Management Application

What is the resource cost involved in tracking, keying, cross-referencing and validating transactions?

Competing in a global economy with a lean team requires automation for bottom line growth. Business is difficult to scale when the team is spending time processing and tracking purchase orders and shipments.

The largest industry-specific supplier collaboration network with cloud-based solutions for automating your supply chain processes.

Benefits

- Improves material scheduling and receipt efficiencies
- Increases accounts payable performance
- Lowers material inventories throughout the inbound supply chain
- Enables a more efficient use of working capital

Key Capabilities

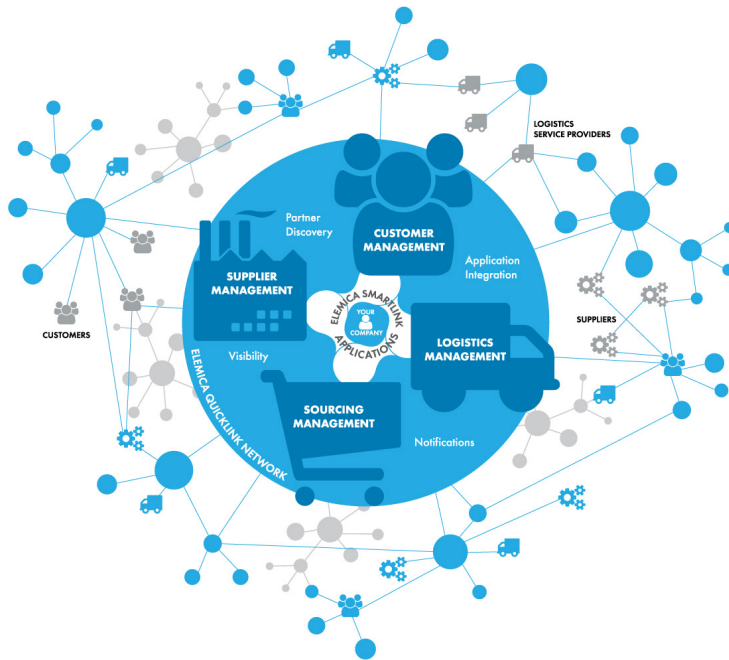

- Capture early payment discounts
- Supports a portfolio of international and local message standards
- A scalable international business model
- Automatically identify and remove errors
- Simplify procurement and financial processes

Elemica's Purchase Order Management solution reduces the risk of errors with manually entered orders. No visibility compounds into expensive problems when the product is delayed or missing at the dock. When a fax, Email, paper or phone order is sent, success is assumed until something goes wrong. Consider the amount of time spent on low value add activities including confirming items, shipments, prices, invoice amounts and invoice payments.

Electronically send purchase orders, changes and cancellations, as well as receive order acknowledgements, and shipping notices with suppliers worldwide in a variety of data standards and languages. Trading partners can access the data by online portal or file integration with back office applications.

Supplier Management Solution Suite Overview

Elemica Supplier Management delivers results that drives the ideal balance of inventory, working capital and service levels while providing innovative capabilities:

Purchase Order Management:

Eliminates the risk of small errors with manually entered orders.

Vendor Managed Inventory:

Provides supply visibility across customers and products.

Delivery Forecast:

Furnishes the supplier with discreet orders, order changes, and forecast documents.

Global Supply Management:

Supports automation, visibility, management and analysis for shipments and inventory across global supply chains.

Certificate of Analysis (CoA):

Attest or affirm the provided quality data is correct for a given product.

Invoice Management:

Electronic invoicing for material, service and freight invoices.

Transforming the Way Your Company Does Business

As the leading Supply Chain Operating Network for the global process industries, our customers create and operate high performance supply chains with solutions at the heart of their business. Elemica drives bottom line business results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers, and seamless information flow between business partners. We transform supply chains by replacing manual and complex approaches with automated and reliable ones.
