Elemica
Move | Eyefreight TMS

Get centralized freight management optimization designed specifically to help shippers take control of logistics performance and risk.

Challenge

Global enterprises spent approximately $9.6T on logistics-related services in 2020. But how much was spent wisely? Many organizations are often too buried in spreadsheets, emails and phone calls to be able to proactively plan.

This lack of transportation data connectivity and standardization means there is no single platform or central rate repository you can use to streamline transactions. Overspending is often endemic, as are operational risks and potential delays. And when you're growing quickly, it's tough to find a solution that can scale up with you.

How can you empower your team to see across the supply chain and standardize data? Furthermore, how can you put that data to work in a way that transforms high-impact KPIs?

Solution

The Elemica Move™ Eyefreight TMS module is a packaged suite that connects transportation providers directly to your ERP system to deliver real-time updates and total logistical awareness. Eyefreight TMS automatically finds the best combination of routes and carriers to get your delivery to its destination on time and at the lowest cost; even without human intervention if desired.

Access real-time data, along with the chance to take action when it counts. Some of the world's leading corporations such as ABB, Levis Strauss & Company and Heineken have streamlined their logistics function with Eyefreight TMS— optimizing shipping loads, getting more value from carrier contracts, refining multi-modal transportation arrangements, automating critical transactions, improving the accuracy of shipping cost estimates and more.
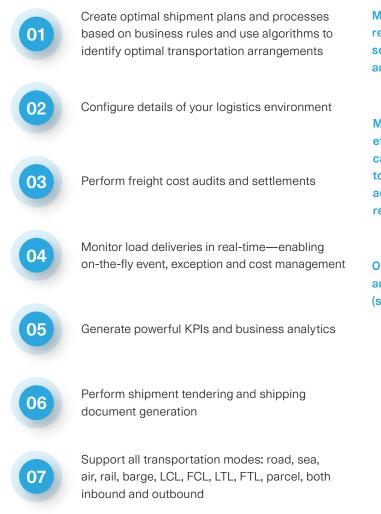

- **Get real-time logistics data across the supply chain**
- **Reduce logistics-related spend and waste**
- **Improve real-time decision quality**
- **Maximize value from carriers and other providers**
- **Automate or streamline transportation operations**

Elemica

At a Glance
Eyefreight TMS

Features

01 Create optimal shipment plans and processes based on business rules and use algorithms to identify optimal transportation arrangements

02 Configure details of your logistics environment

03 Perform freight cost audits and settlements

04 Monitor load deliveries in real-time—enabling on-the-fly event, exception and cost management

05 Generate powerful KPIs and business analytics

06 Perform shipment tendering and shipping document generation

07 Support all transportation modes: road, sea, air, rail, barge, LCL, FCL, LTL, FTL, parcel, both inbound and outbound

Benefits

Merge transportation-related data from multiple sources, carriers, regions and accounts

Consolidate orders based on location, delivery window and package dimensions

Manage costs more effectively, from reviewing carrier contract terms to rejecting or approving additional costs in real-time

Know where every shipment stands and manage deviations proactively, keeping planners and other stakeholders informed in real time

Optimize inbound and outbound loads (simultaneously)

Save 5–10 percent on freight cost overall and between $15 and $25 on labor cost per shipment

Elemica transforms supply chains by replacing manual and complex approaches with efficient and reliable ones. The world's leading business network for process-intensive industries, we drive bottom line results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers and seamless information flow between trading partners.
