**QuickLink  
Automate**

Digitize shipment transactions with the long-tail of road carriers, ensuring automation of 100 percent of your shipments.

### Challenge

Establishing Enterprise Resource Planning (ERP) connectivity with carriers and other logistics service providers is key to keeping everyone informed and maintaining strong customer service. That's why many shippers embark on projects to connect to their carriers for milestones and real-time status information. But what about when such an integration isn't possible or advisable?

The global logistics industry is worth an estimated \$8 to \$12 trillion USD, with countless carriers in 200+ countries. Though it takes more time, shippers often participate in back-office connectivity initiatives with high-volume carriers. But for the rest, it's simply not worth it. That means while you might have full visibility into shipment status with some carriers, you—and your customers—will still have many blindspots.

Many smaller carriers or international carriers in certain regions may not have mature technical capabilities.

But how can you create transparency and automation without connecting this huge number of carriers, which could number in the hundreds for just a single shipper?

### Solution

QuickLink Automate Move uses an ingenious application to onboard and digitize these smaller-volume, unconnected carriers. All without the need for a back-office ERP integration. This powerful module communicates your shipment information to the carrier via an email—while also providing a link to a webform that allows the carrier to respond and provide status information about the shipment. So you'll get shipment and status information from an unlimited number of carriers as it's shared.

With the Ele mica Move™ QuickLink Automate module, shipping data and status from these once dark providers is now digital, connected and transparent. This data migrates from email to ERP upon receipt, alerting you of potential issues ASAP and letting you manage by exception

more effectively. No more partial digitization. No more shipping-related blindspots.

With QuickLink Automate, you can now digitize 100 percent of logistics activity. This means better customer service, fewer expedited shipments, less spend per shipment, more accurate logistics analytics and more leverage when negotiating carrier rates and fees. And there is minimal work required to onboard each carrier.

- **Increase digitization**
- **Connect all carriers to your ERP**
- **Get more visibility**
- **Reduce expedited shipments**
- **Fast-track carrier onboarding**
- **Prevent operational disruptions**

## QuickLink Automate

### Features

01

Connect the shipment data and status of an unlimited number of carriers around the world without a lengthy ERP integration

02

Carriers can respond to shipments, providing updated ETAs and/or reject reasons

03

Once a carrier confirms a shipment, they can add milestones, discrepancies, reasons, document attachments, and electronic PODs

04

Can be used on a mobile device and accessed by drivers to add consignee e-Signatures and service ratings

05

Carriers only need to click an email; no technical skills required on their part

06

Fast-track onboarding of carriers via automated email platform

### Benefits

Improve overall logistics automation, capturing a previously offline set of carriers and shipments

Shave up to \$47 per shipment and 1–2 days off of shipment cycle time by streamlining shipment processing

Require no work, investment, training, portals or passwords on the part of your carrier network

Improve customer service levels; don't wait until a customer alerts you to a late or missing shipment

Enhance overall shipping performance

Minimize manual data entry

Reduce transportation-related errors

Elemica transforms supply chains by replacing manual and complex approaches with efficient and reliable ones. The world's leading business network for process-intensive industries, we drive bottom line results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers and seamless information flow between trading partners.
