Move

Terminal and
Warehouse Visibility

Integrate shipment and inventory data from across your third-party storage locations into your ERP to improve customer service and speed up cash-to-cash cycle.

Challenge

The ability to store and stage inventory at warehouses and terminals across the globe is critical to modern supply chains. But getting data from these locations into your Enterprise Resource Planning (ERP) system can be difficult. These third-party facilities have disparate information environments, and often rely on manual communication with shippers. They may not even have compatible enterprise systems across their own internal functions (shipping, inventory, etc.).

Depending on the specific enterprise, a company could have goods scattered across hundreds of warehouses and terminals. There are more than 18,000 warehouses and 360 commercial ports in the United States alone. How can you get visibility into all of the products, parts, materials, components and manufacturing inputs you have scattered so widely?

Requesting each facility's order receipts, outbound shipping confirmations, inventory adjustments, compliance documentation, invoicing and more requires a surprising amount of administration. A

point-to-point integration would solve the problem, but would rely on third-party users to have a certain level of technical capability. And you need this information to properly manage inventory and execute on customer service.

Solution

The Elemica Move™ Terminal and Warehouse Visibility module lets you connect data from these disparate facilities into your ERP system without the need for an expensive ERP implementation for each location. Plugging into the Elemica network means eliminating data delays surrounding these facilities—invoicing customers more quickly and accelerating the cash-to-cash cycle. You'll be able to maintain accurate inventory counts so you can plan replenishment more accurately, avoiding stock-outs and excess inventory. No frustrating data delays. No excessive admin or financial corrections.

The module lets you onboard third-party warehouses and terminals quickly, digitizing and integrating their manual communications for upload into your ERP. And you'll get more than just static data. Terminal and

Terminal and Warehouse Visibility •

ProcessWeaver

Warehouse Visibility lets you get real-time shipping updates, receipt confirmations, inventory adjustments, and more—so you'll know where you stand no matter how widely scattered your inventory and assets.

This powerful platform keeps you better informed regarding assets held at third-party facilities, so you can improve your control over inventory, investment, deployment, compliance and spending. From real-time inbound shipment processing notifications to documentation access for auditing purposes, never again feel left in the dark when it comes to inventory held at remote warehouses and terminals.

- Accelerate the order-to-cash cycle
- Improve inventory visibility
- Get real-time facility notifications
- Avoid expensive IT implementations
- Reduce administrative costs
- Enable more accurate accounting

Terminal and Warehouse Visibility

Features

01

Captures or syncs key shipment information including inbound shipment receipts, outbound shipment processing status, on-hand inventory data and real-time inventory adjustments

02

Standardizes message formats and business processes across a variety of distribution facilities' disparate environments

03

Requires no additional technical investment or training on the part of host terminals or warehouses

04

Delivers configurable exception-based alerts and PGI/PGR positive confirmations regarding shipments

05

System's data module lets you store and access shipment-specific documents and packing lists

06

Captures facility-specific data for stronger analysis of distribution network performance

Benefits

Protect customer service levels with more visibility and responsiveness

Help contribute to overall enterprise supply chain digitization and ERP data quality

Save an average of \$5,000 per warehouse or terminal location through the digitization of inventory data from their facilities

Get high-value ERP data input while avoiding the prospect of an expensive ERP integration with each third-party location

Accelerate the order-to-cash cycle for faster invoicing and tighten enterprise inventory status accuracy

Reduce the extensive administrative costs that come with delays in shipping data from numerous third-party distribution facilities

Elemica transforms supply chains by replacing manual and complex approaches with efficient and reliable ones. The world's leading business network for process-intensive industries, we drive bottom line results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers and seamless information flow between trading partners.
