Transport with  
ePOD Mobile App

This powerful app lets ground transportation providers without fleet Global Positioning Systems (GPS) share status and location to fuel your visibility initiatives.

### Challenge

Major, modern providers of ground transportation deploy advanced, interconnected GPS systems and other technology to keep everyone aware of delivery information, location and status in real time. But what about the thousands of other, more low-tech providers of ground transportation around the world?

With a global ground and handling services sector projected to reach \$37B by 2025, and significant economic and infrastructure growth in developing countries, you can't always count on ground carriers being GPS-enabled or otherwise technically robust. This lack of location and data sharing is a big problem. It means when shippers step outside of the major providers, they oftentimes can't get a true status update, either for themselves or their customer.

The lack of connectivity does more than just frustrate status efforts. Other functions made possible by the digitization of ground transportation operations are also impeded. These include transactional functions such as booking, electronic signatures and

proof of delivery validations. But how can we connect and track these low-tech ground carriers at all? Much less aggregate their data into a visibility solution or ERP.

### Solution

Elemica Move™ Transport with ePOD Mobile App brings these data-dark ground carriers into the light through commonly accessible mobile technology that's not dependent on GPS devices or a robust IT environment. Through a simple app that can be downloaded to almost any common mobile device around the world, the ePOD Mobile App lets truck drivers enter key status information, attach cargo images and documents, collect eSignatures and more.

The data collected from the driver is fully visible in Elemica's Trace shipment visibility solution, allowing users to track shipments and recall shipment details, receive and share electronic Proof of Delivery (POD) validations and ensure that potential issues are noticed and corrected before they become customer service problems. By involving the driver in the data collection process,

<b>ELEMICA MOVE™ MODULES</b>
<b>Eyefreight TMS</b>
<b>Transportation Execution</b>
<b>Transport with ePOD Mobile App •</b>
<b>QuickLink Email Move</b>
<b>Time Slot Management</b>
<b>Freight Cost Management</b>
<b>Terminal and Warehouse Visibility</b>
<b>ProcessWeaver</b>

you receive feedback directly from customers in real-time.

The ePOD Mobile App also arms your enterprise with valuable data relating to these low-tech ground carriers. You'll be able to better assess ground carrier performance, giving you an advantage in vendor review and negotiation. And users can feel confident in the quality and usability of the data, with the ability to configure milestones, reason codes and response options as best fits their enterprise.

- **Connect with low-tech ground carriers**
- **Access real-time shipment details**
- **Get digital proof of delivery**
- **Protect customer service levels**
- **Get direct-to-ERP transport data**
- **Automate booking and check-calls**

## At a Glance

# Transport with ePOD Mobile App

## Features

01

Quick-install application available for download in 200+ countries and an unlimited number of ground transport providers

02

Electronic Proof of Delivery (POD), signatures, delivery feedback and access to other critical service-related data

03

Data normalization capability via configurable milestone, reason codes, responses and other common transactional values

04

Easy-to-use carrier portal that facilitates quality data in a timely manner when it's most useful

05

Direct data relay between the Elemica Move™ ePOD Mobile App and your ERP system

06

Automated ground-carrier transactions such as delivery booking and check-calls

## Benefits

**Get real-time shipment status and location information from ground carriers whose fleets are not GPS-enabled**

**Establish a real-time data feed between your ERP and this hard-to-integrate class of carrier**

**Save between \$15–\$20 per shipment through streamlined carrier communication**

**Protect service levels through greater awareness of delivery status and potential exceptions**

**Improve supply chain insights, connectivity and analytics in developing nations and regions**

**Onboard low-tech ground carriers quickly and in a way that demands no training, technical skill or IT investment**

Elemica transforms supply chains by replacing manual and complex approaches with efficient and reliable ones. The world's leading business network for process-intensive industries, we drive bottom line results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers and seamless information flow between trading partners.
