 | **Transportation Execution**

Digitize, connect and automate shipment transactions across carriers to improve transportation-related decisions, efficiency and economics.

### Challenge

Fast, accurate and cost-effective shipping and fulfillment is essential for a strong business. But this is easier said than done. The details surrounding transportation are expansive, not inherently transparent and largely out of your control. And transportation's economic impact really adds up. According to the Wall Street Journal, companies spent \$1.5T on shipping in 2017 alone.

An inability to access and analyze shipping data when it counts, as well as limitations surrounding the efficiency of transportation-related transactions, has a profound negative impact on your business. Rework. Overspend. Longer cash-to-cash cycle. How can you comprehensively and definitively take control of shipping performance, productivity and spend?

### Solution

The Elemica Move™ Transportation Execution module connects you to carriers across your supply chain—automating routine transportation operation and reporting in a way that transforms complexity into competitive advantage. Enable automatic execution of ERP-connected shipment status, assess carrier performance more accurately and get the tools you need to optimize transportation as a whole—including an existing network of carriers.

Transportation Execution brings a digitally enabled layer of shipping assurance to all of your deliveries and transportation-related partnerships. Users have zero doubt about the status or details surrounding any shipment or carrier. Shipping happens with less doubt and delay than ever before, delivery plans are optimized and significant and quantifiable cost savings are realized.

#### ELEMICA MOVE™ MODULES

Eyefreight TMS

Transportation Execution •

Transport with ePOD Mobile App

QuickLink Automate Move

Time Slot Management

Freight Cost Management

Terminal and Warehouse Visibility

ProcessWeaver

- Automate critical shipping transactions
- Lower shipping-related costs
- Eliminate errors and avoid costly rework
- Improve customer satisfaction and retention

# At a Glance

## Transport Execution

### Features

01

Brings together a number of powerful Elemica modules for total multi-modal transportation automation

02

Automate shipping-related transactions, including shipping acceptance

03

Streamline the creation and sharing of shipping-related documentation

04

System provides alerts regarding not just shipment and carrier status but also changes

05

Automates request/response cycles with carriers across the supply chain

06

Extensive global, multi-modal carrier network

### Benefits

Improved shipping performance

Reduced manual data entry

Fewer transportation-related errors

Lower premium freight charges

Elemica transforms supply chains by replacing manual and complex approaches with efficient and reliable ones. The world's leading business network for process-intensive industries, we drive bottom line results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers and seamless information flow between trading partners.
