 | QuickLink Accelerate

DIY conversion of order-related image files and inbound email orders into ERP-readable data for faster, more accurate order entry.

Challenge

Though integrating the demand signals of high-volume customers into Enterprise Resource Planning systems takes a lot of up front work, it's well worth it. The time spent on custom-mapping inbound email orders through systems such as Elemica's Sell™ QuickLink Integrate means more efficient management of working capital and a better customer experience.

But what about all of those smaller customers? Many enterprises have a large number of low-volume accounts whose numbers add up on the aggregate—but for whom, taken individually, custom mapping and in-depth implementation just doesn't make sense. But With QuickLink Accelerate, there's finally a way to streamline this inbound data—improving efficiency and accuracy without all of the upfront work.

Solution

QuickLink Accelerate lets you fine tune the conversion of customer PDFs and image files yourself. With support from our customer service team, you take control of email and document intake rules, fast-tracking intelligent processing setup. Once configured, QuickLink Accelerate uses machine learning, artificial intelligence and robotic process optimization to enable rapid order entry and administration of all email data.

From a customer perspective, nothing changes—and no customer participation is required. They continue to email order info as always. Only now this data is easy to enter into your ERP system in bulk without relying on time-consuming and error-prone field-by-field entry.

At a Glance

QuickLink Accelerate

Features

01

Extracts inbound orders from faxes/images, and data for ERP order entry solutions and routing info (automatically delivers document to customer service)

02

Order change support

03

Converts image files to binary data: GIF, TIFF, PDF images, etc. to XML or EDI

04

Learns to codify issues relating to resolution of images

05

Inherent network-level MDM delivers orders with your product, location, and unit of measure codes

06

Team-based user management and customer-based security model

07

Multiple machine learning ML models for automated map-less data extraction

08

Robotic process automation to embed customer service knowledge into the automate work process

Benefits

Accelerates order processing, on average from 30 minutes to 120 seconds or less

Requires zero customer participation for more control and convenience

Improves order accuracy, resulting in happier customers

Enables easy set up, use and modification with total support

Frees up customer service personnel to focus on customer satisfaction and cross-selling

Elemica transforms supply chains by replacing manual and complex approaches with efficient and reliable ones. The world's leading business network for process-intensive industries, we drive bottom line results by promoting reduced cost of operations, faster process execution, automation of key business processes, removal of transactional barriers, and seamless information flow between trading partners.
